

ADITYA PRABHAT GUPTA

Full Stack Engineer

+91-9695535380 | adityagupta2474@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full Stack Engineer with hands-on experience building scalable real-time and AI-powered web applications using modern JavaScript technologies. Skilled in designing responsive frontend architectures, secure backend systems, REST APIs, and low-latency real-time communication using WebRTC and Socket.IO. Strong understanding of authentication, cloud deployment, performance optimization, and scalable application development.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Vite, Tailwind CSS, React Router DOM, Axios, Framer Motion, Responsive Design

Backend: Node.js, Express.js, REST APIs, Socket.IO, WebRTC, JWT, bcryptjs, Redis

Databases: MongoDB (Mongoose), MySQL

Cloud & Tools: Git, GitHub, Docker, Cloudinary, FFmpeg, Sharp, Vercel, Render, Netlify, Postman

AI & ML: TensorFlow, Prompt Engineering, AI Integration, Groq API, Gemini AI

EXPERIENCE

Artificial Intelligence & Generative AI Intern

June 2025 – July 2025

YBI Foundation

Remote

- Engineered AI-powered applications using Generative AI APIs and prompt engineering workflows
- Implemented machine learning workflows involving model experimentation, debugging, and AI-based solution deployment

PROJECTS

Convox – Real-Time Chat & Calling App | MERN, Socket.IO, WebRTC, Redis, Cloudinary | [GitHub](#) | [Live](#)

Apr 2026

- Engineered a real-time messaging and calling platform using **WebRTC** and Socket.IO supporting **100+ concurrent interactions** with chat, typing indicators, online presence, and peer-to-peer audio/video communication
- Integrated **Google OAuth 2.0** and **JWT Authentication** for secure user access and session management
- Implemented media compression pipeline using **Cloudinary**, **Sharp**, and **FFmpeg**, reducing media upload size by **60%** and improving upload performance across image and video handling
- Integrated AI-powered conversational assistance using Groq API and implemented Redis-backed scalable backend workflows with Docker-based deployment architecture

Project Management System | React.js, Node.js, Express.js, MongoDB, JWT | [GitHub](#) | [Live](#)

Jan 2026

- Developed a MERN-based project management platform featuring a **Kanban Board**, task tracking, and Role-Based Access Control
- Designed scalable RESTful APIs for project, task, and user management with secure **JWT Authentication**
- Built scalable task management workflows handling **100+ project and task operations** with optimized REST API performance and efficient state management

RecipeX – Recipe Discovery Platform | React.js, React Router, TheMealDB API | [GitHub](#) | [Live](#)

Dec 2025

- Built a recipe discovery platform with category-based filtering and dynamic search functionality
- Reduced redundant API calls by **70%** using debouncing techniques, improving frontend performance
- Implemented protected routes and persistent favorites functionality

AI Medical Assistant Chatbot | Python, TensorFlow, JavaScript, Groq API | [GitHub](#) | [Live](#)

Mar 2025 – Mar 2026

- Led a **3-member team** to develop an NLP-based healthcare chatbot using **TensorFlow** for intent classification and symptom-based disease prediction
- Further enhanced the platform with AI-powered medical assistance using Groq API, health quiz modules, wellness recommendations, and secure **JWT Authentication**
- Secured Runner-Up Position in RIT Hackathon 2025 among **20+ participating teams**

ACHIEVEMENTS & CERTIFICATIONS

3rd Place – VibeCon '26 AI Creator Showcase (GDGoC RIT Roorkee) – Built DreamForge AI using Gemini AI, Imagen API, React.js, and Framer Motion

Runner-Up – RIT Hackathon 2025 – Developed NLP-based AI Medical Assistant Chatbot using TensorFlow

Full Stack Development with AI – Physics Wallah x NSDC x PwC — 2026

Core Competencies: Full-Stack Development, REST API Design, Authentication & Security, Real-Time Systems
